## Job Costing and Time Recording Database

The **Job Costing** and time recording database is a powerful tool that can be used to analyse and manage the cost of jobs and labour resource usage in your factory. It allows you to track actual costs and labour times against budgeted and projected values in a range of categories for timesheets, materials and labour.

The database provides actual 'hard facts reporting' that takes the guess work out of future estimates. Eliminate 'guestimating' from your business.

Integrates directly with **Woodman** production.

### Key benefits :-

- Easy to use and understand.
- Compare on-going costs with projected values
- Provides actual data for future estimates. Eliminates 'guestimates'.
- Provides instant work in progress valuations.
- Highlights actual variance from budget for all jobs.
- Lists current status of all jobs.

### Easy Reporting

Easy to use reports provide up to the minute information on customer orders, jobs, materials and departmental labour resource usage. All reports are automatically available and can be viewed at any time either on the screen or by printing to your printer. Reports can be viewed for any range of dates that you select, thus enabling daily, weekly, monthly or year to date reporting at any time.

### Designed with Woodworkers in mind.

The Job Costing and Time Recording Database is our own product that has been specifically designed utilising feedback from small to medium sized, woodwork manufacturers.

With over 25 years experience in developing software systems for woodwork manufacturers, we understand the nature of your business. We also understand our clients. We offer cost effective, easy to use solutions, designed specifically for your industry.
